AB The method, suitable for use on SiO₂ outermost layers of
antireflective coatings, comprises the steps of: treating
the SiO₂ layer with a silane compds., or forming a
graft-polymd. layer on the treated surface; the silane
compds. contain SiNR₁R₂ and/or SiNR₃Si (R₁-3 = H, org. group). The
process forms antistaining antistatic layers on antireflective
layers on plastic lenses.
